

HOOGS CUTTING SYSTEMS
GmbH & Co. KG

For a perfect cut

With us you will always have a perfect cut!

We work hard in order to facilitate your production – with state-of-the-art cutting machines made in Germany.

As one of the leading German manufacturers we have developed cutting machines for almost all requirements – for the textile industry through to environmental engineering and advertising.

Even in times of globalisation: quality is a company tradition. Our technical know-how from almost a century of production flows into every single machine. Our staff know our customers' wishes, they know what counts and are totally committed.

Reliability? It is as natural for us as it has always been. A sturdy construction and modern technology guarantee a long operational life span. And if a malfunction happens, our technical staff carry out repairs fast and cost-effectively. Our spare parts store is always well stocked and guarantees a high availability.

Flexibility is the challenge of the 21st century. Therefore, service is our priority. We react immediately to our clients' wishes. And a constant dialogue leads to new and optimised solutions for almost all operational areas.

We are looking forward to presenting our products to you personally.

From the specialist to the all-rounder: HOOGS cutting machines.

Electric and pneumatic shears

Our electric and pneumatic shears ensure precise cutting of various materials, e.g. textiles, foils and synthetic materials. We offer you a great variety of types for cutting heights up to 15 mm. Our all-rounders are easy to handle, powerful in their perfor-

mance and neat in the execution of a task. Depending on the model, more versions and a large range of accessories are available.

Round-knife machines

Our round-knife machines are proper power packs and perform precise cuts up to a cutting height of 45 mm for almost all textiles and synthetic materials. They are supplied in three different series, are available in a lot of special versions and make pleasant and straightfor-

ward working possible at any time.

Manual laying-out and cut-off devices

With our laying-out and cut-off devices you can trim and cut textiles and similar materials to the nearest millimetre without material wastage, technically perfect, easily and precisely. The laying-out and cut-off devices are manufactured individually for

your table width and work effortlessly due to their belt-lifting device with a maintenance-free sliding or roller guide on both sides.

Automatic laying-out and cut-off devices

Our automatic laying-out and cut-off devices work at the touch of a button. They are equipped with a maintenance-free and robust asynchronous motor and will allow you to trim and cut to the nearest millimetre without material wastage. Their

mechanic construction and advantages are same as for the manual devices. They are ideal for saving time on larger material widths.

Integrated machines

Our integrated machines are used in many automation solutions of leading mechanical engineering companies and take on the "cutting" sector with perfection. Machines with a high blade rotation speed for precise cutting, fast endurance runners with more

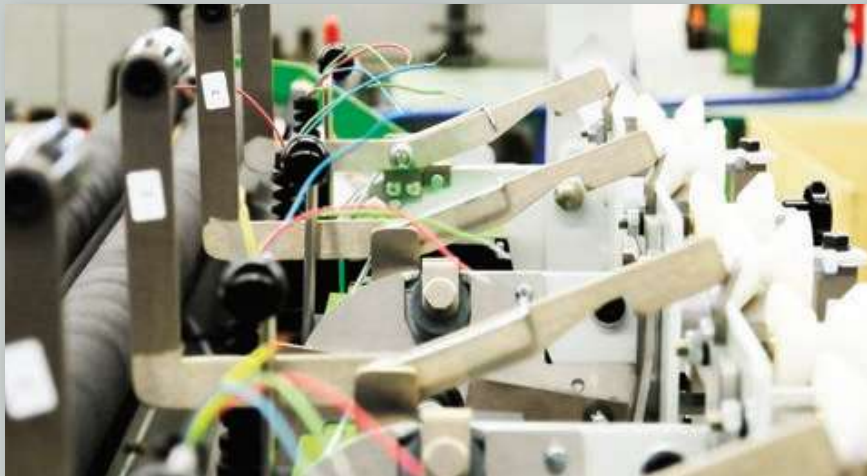

cutting height, machines for two-sided cutting with direct drive, longitudinal cutters and machines for special materials right up to modules that can be integrated. We offer the right solution for every challenge.

Work tables

We would be happy to supply you with the right work table to go with our laying-out and cut-off devices. Thanks to its precision rectangular tube construction it is very stable and wear-resistant. Our work table comes with a 30 mm thick coated work top

and its adjustable hinged feet allow you to vary the working height. We manufacture the work tables individually according to your wishes.

Special machines

Our fully automated cutting systems ZSL-A and VLA convince by their well-engineered technology and their high scale economy for trimming and cutting. Both systems allow you to produce right-angle cuts without tension, make longitudinal cuts, stack or roll

up. Both systems are fully automated, easy to handle and can be tailored to your wishes.

Accessories

Every device and every machine that leaves our production is registered with us in detail. Our store is extremely well stocked and we keep most standard parts and components ready for you. This means a high availability and a fast

delivery with a minimal loss of time for your company.

HOOGS CUTTING SYSTEMS

GmbH & Co. KG

Possible operational areas

- > Textile industry
- > Home textiles
- > Leather, furs and hides
- > Upholstery and furniture industry
- > Carpets, wall and floor coverings
- > Tents, canvas and blinds
- > Automotive
- > Environment and filter technology
- > Energy management
- > Safety technology
- > Aerospace technology
- > Landscaping
- > Packaging industry
- > Advertising
- > Various uses in technical and industrial areas
